

TANGENT™

WALKER
ZANGER

www.walkerzanger.com

A tangent is defined as “a line that touches but does not intersect a curve.” It is a word that describes geometry, but also one used to describe heading off in directions unknown. Both definitions are appropriate for our new collection of decorative stone mosaics, in which abstract geometry and mid-century modern design influences merge with the beauty of natural stone, creating a richness of pattern and color that will beguile you anew each time you see it.
